

Handling resources

Let build system handle resources

Write a platform-dependent resource manager

```
class Resource {  
public:  
    virtual std::unique_ptr<std::istream> stream() const = 0;  
    virtual ~Resource() {}  
};  
  
std::shared_ptr<const Resource> loadResource(std::string name);
```

Handling resources

- ✦ Let build system handle resources
- ✦ Write a platform-dependent resource manager

```
class Resource {  
public:  
    virtual std::unique_ptr<std::istream> stream() const = 0;  
    virtual ~Resource() {}  
};  
  
std::shared_ptr<const Resource> loadResource(std::string name);
```
